## Patent Application for

## SOFTWARE-BASED NETWORK ATTACHED STORAGE SERVICES HOSTED ON MASSIVELY DISTRIBUTED PARALLEL COMPUTING NETWORKS

Inventors: Edward A. Hubbard

This application is a continuation-in-part application of the following co-pending applications:

Application SN 09/538,543 entitled "DISTRIBUTED PARALLEL PROCESSING SYSTEM HAVING Notice in the control of the following co-pending applications:

CAPABILITY-BASED INCENTIVES AND ASSOCIATED METHOD," Application SN 09/539,023 entitled "SWEEPSTAKES INCENTIVE MODEL AND ASSOCIATED SYSTEM," Application SN 09/539,448, entitled "CAPABILITY-BASED DISTRIBUTED PARALLEL PROCESING SYSTEM AND ASSOCIATED METHOD," Application SN 09/539,428 entitled "METHOD OF MANAGING INCOME AND ASSOCIATED SYSTEM," Application SN 09/539,106 entitled which and about the control of the control o

This application is also a continuation-in-part application of the following co-pending applications: Application SN 09/603,740 entitled "METHOD OF MANAGING WORKLOADS AND Which is not about the following co-pending application: Application SN 09/602,789 entitled "MACHINE GENERATED SWEEPSTAKES ENTRY MODEL AND ASSOCIATED DISTRIBUTED Which is for the following co-pending "MACHINE GENERATED SWEEPSTAKES ENTRY MODEL AND ASSOCIATED DISTRIBUTED PROCESSING SYSTEM," Application SN 09/602,803 entitled "DATA SHARING AND FILE Which is formally to the following co-pending application SN 09/602,789 entitled "DATA SHARING AND FILE Which is formally to the following co-pending application SN 09/602,789 entitled "DATA SHARING AND FILE Which is formally to the following co-pending application SN 09/602,789 entitled "DATA SHARING AND FILE Which is formally to the following co-pending application SN 09/602,789 entitled "DATA CONVERSION SERVICES AND ASSOCIATED DISTRIBUTED PROCESSING SYSTEM," and Application SN 09/602,983 entitled "CUSTOMER SERVICES AND ADVERTISING BASED UPON DEVICE ATTRIBUTES AND ASSOCIATED DISTRIBUTED PROCESSING SYSTEM," each of which was filed on June 23, 2000, and each of which is hereby incorporated by reference in its entirety.

This application is also a continuation-in-part application of the following co-pending application: Application SN 09/648,832 entitled "SECURITY ARCHITECTURE FOR DISTRIBUTED PROCESSING SYSTEMS AND ASSOCIATED METHOD," which was filed on August 25, 2000, and which is hereby incorporated by reference in its entirety.

This application is also a continuation-in-part application of the following co-pending application: Application SN 09/794,969 entitled "SYSTEM AND METHOD FOR MONITIZING NETWORK CONNECTED USER BASES UTILIZING DISTRIBUTED PROCESSING SYSTEMS!"

which was filed on February 27, 2001, and which is hereby incorporated by reference in its entirety.

## **Technical Field of the Invention**

This invention relates to distributed processing and more particularly to techniques and related methods for managing, facilitating and implementing distributed processing in a network environment.

## Background

The NAS (Network Attached Storage) market is currently one of the fastest growing segments of the overall storage market. NAS devices typically take the form of stand-alone devices or systems that contain their own storage, processing, connectivity and management resources. Through these internal capabilities, the NAS device becomes a storage resource that connects to any network enabling many devices on the network to share data via the NAS device.

A NAS device is a term that is often used to refer to a specialized file server that connects to the network to provide storage capacity to network-connected users. NAS devices typically contain a slimmed-down (micro-kernel) operating system and file system. NAS devices often process only input/output (I/O) requests by supporting popular file sharing protocols such as NFS (UNIX) and SMB (DOS/Windows). NAS devices also typically use traditional LAN protocols such as Ethernet and TCP/IP to communicate over the network. Some general-purpose computers using full-blown operating systems such as Windows or UNIX are often labeled as NAS products because they can provide storage that is attached to a network. However, a pure NAS device is one built from scratch as a dedicated file I/O device. As used herein, the term "NAS device" broadly refers to a device that makes data storage resources available to network-connected user devices. A "dedicated NAS device" is a device whose primary operational purpose is for providing NAS services.
